

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0036. The time required to complete this information collection is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

OMB APPROVED
0579-0036
Exp.: 10/31/2018

This report is required by law (7 U.S.C. 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A.	B.	C.	D.	E.	F.
Animals Covered By The Animal Welfare Regulations	Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	103	0	0	103
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A.	B.	C.	D.	E.	F.
Animals Covered By The Animal Welfare Regulations	Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

(TYPE OR PRINT)

1. REGISTRATION NUMBER
74-R-0048

2. HEADQUARTERS RESEARCH FACILITY (Name, address, and telephone number as registered with USDA, include ZIP Code)

Texas State University
601 UNIVERSITY DRIVE
J C K 489
SAN MARCOS, TX 78666

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, teaching, or experimentation, or held for these purposes. Attach additional sheets, if necessary.)

FACILITY LOCATIONS (Sites)

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A.	B.	C.	D.	E.	F.
Animals Covered By The Animal Welfare Regulations	Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals	0	67	0	0	67

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL
(*Chief Executive Officer (C.E.O.) or Legally Responsible Institutional Official (I.O.)*)

I certify that the above is true, correct, and complete (7 U.S.C. Section 2143).

22-NOV-2013

(b)(6), (b)(7)(c)

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0036. The time required to complete this information collection is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

OMB APPROVED
0579-0036
Exp.: 10/31/2018

This report is required by law (7 U.S.C. 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, teaching, or experimentation, or held for these purposes. Attach additional sheets, if necessary.)

FACILITY LOCATIONS (Sites)

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A.	B.	C.	D.	E.	F.
Animals Covered By The Animal Welfare Regulations	Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A.	B.	C.	D.	E.	F.
Animals Covered By The Animal Welfare Regulations	Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	38	0	38
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	10	0	0	10
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	155	0	155
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	8	0	8
11. Pigs	0	10	82	0	92
12. Other Farm Animals	0	0	2	0	2
13. Other Animals	25	24	0	0	24

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, teaching, or experimentation, or held for these purposes. Attach additional sheets, if necessary.)

FACILITY LOCATIONS (Sites)

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A.	B.	C.	D.	E.	F.
Animals Covered By The Animal Welfare Regulations	Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	4	93	0	0	93
5. Cats	0	33	0	0	33
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A.	B.	C.	D.	E.	F.
Animals Covered By The Animal Welfare Regulations	Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals	0	7	0	0	7

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ANNUAL REPORT OF RESEARCH FACILITY
(TYPE OR PRINT)

1. REGISTRATION NUMBER
74-R-0161

2. HEADQUARTERS RESEARCH FACILITY (Name, address, and telephone number as registered with USDA, include ZIP Code)

Equitech-Bio Inc.
512 COTTON GIN LANE
KERRVILLE, TX 78028

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, teaching, or experimentation, or held for these purposes. Attach additional sheets, if necessary.)

FACILITY LOCATIONS (Sites)

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A.	B.	C.	D.	E.	F.
Animals Covered By The Animal Welfare Regulations	Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	15	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals	77	0	120	0	120
13. Other Animals					

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL
(*Chief Executive Officer (C.E.O.) or Legally Responsible Institutional Official (I.O.)*)

I certify that the above is true, correct, and complete (7 U.S.C. Section 2143).

SIGNATURE OF C.E.O. OR I.O.

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

- 1. Registration Number:** 74-F-0001.
- 2. Number of animals used in this study:** 60
- 3. Species (common name) of animals used in the study:** Pig
- 4. Explain the procedure producing pain and/or distress.**

Laser exposures, titrated to the dose needed to cause 50% of subjects to flee, will be performed for a duration of less than 10 seconds.

- 5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below).**

The objective of the unalleviated pain portion of this study is to measure the behavior of subjects exposed to high-energy laser exposure – anesthesia or analgesia would alter this behavior.

- 6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102).**

None.

FOUO

Study #1

12 Cynomolgus Macaques

Animals were inoculated with an infectious agent after treatment with vaccine or control therapy.

Clinical signs must be observed

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 12 cynomolgus macaques used for this study, 11 were assigned a threshold clinical score and were euthanized. 1 died without achieving a threshold clinical score. These 12 animals are classified as category E animal use.

Study #2

4 Guinea Pigs

Animals were inoculated with a newly amplified infectious agent to characterized pathogenicity.

Clinical signs must be observed

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 5 guinea pigs used for this study, 1 survived to the end of the study without developing any signs of infection sufficient to cause morbidity. 4 were assigned a threshold clinical score and were euthanized. These 4 animals are classified as category E animal use.

Study #3

6 rabbits

Animals were inoculated with an infectious agent after treatment with vaccine or control therapy.

Clinical signs must be observed

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 24 rabbits used for this study, 18 survived to the end of the study without developing any signs of infection sufficient to cause morbidity. 6 were assigned a threshold clinical score and were euthanized. These 6 animals are classified as category E animal use.

Study #4

12 Cynomolgus Macaques

Animals were inoculated with an infectious agent after treatment with vaccine or control therapy.

Clinical signs must be observed

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 21 cynomolgus macaques used for this study, 9 survived to the end of the study without developing any signs of infection sufficient to cause morbidity. 12 were assigned a threshold clinical score and were euthanized. These 12 animals are classified as category E animal use.

Study #5

15 Cynomolgus Macaques

Animals were inoculated with an infectious agent after treatment with vaccine or control therapy.

Clinical signs must be observed

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 16 cynomolgus macaques used for this study, 1 survived to the end of the study without developing any signs of infection sufficient to cause morbidity. 10 were assigned a threshold clinical score and were euthanized. 5 died without achieving a threshold clinical score. These 15 animals are classified as category E animal use.

Study #6

1 Baboon

This study is a safety study investigating a single treatment approach to

The animals on this study received a single application of the test article

Out of 28 baboons used for this study, 22 survived to the end of the study, 1 expired due to unrelated causes, and 4 were still alive at the end of the reporting year. One animal expired without exhibiting clinical signs of morbidity. This animal is classified as category E animal use.

2013 Category E Explanations

Registration # 74-R-0003

Customer # 1512

Study #7

44 Guinea Pigs

Animals were inoculated with an infectious agent after treatment with vaccine or control therapy.

Clinical signs must be observed

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 144 guinea pigs used for this study, 95 survived to the end of the study and 5 were still alive at the end of the reporting year. 34 were assigned a threshold clinical score and were euthanized. 4 died without achieving a threshold clinical score. 6 expired after achieving threshold clinical scores but before euthanasia. These 44 animals are classified as category E animal use.

Study #8

4 Baboons

This study is to define the time course changes in platelet counts in baboons after administration of a low or high dose of

Out of 31 baboons used for this study, 27 survived to the end of the study. Two animals were euthanized after achieving clinical signs of morbidity, 1 animal died after going into respiratory arrest following recovery from the initial procedure, and 1 animal was found dead without achieving clinical signs of morbidity. These 4 animals are classified as category E animal use.

Study #9

6 Guinea Pigs

Animals were inoculated with varying concentrations of an infectious agent. This study is to characterize a new stock of virus.

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 25 guinea pigs used for this study, 19 survived to the end of the study without developing any signs of infection sufficient to cause morbidity. 6 were assigned a threshold clinical score and were euthanized. These 6 animals are classified as category E animal use.

Study #10

20 Cynomolgus Macaques

Animals were inoculated with varying concentrations of an infectious agent. This study is to characterize a new stock of virus.

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 24 cynomolgus macaques used for this study, 4 survived to the end of the study without developing any signs of infection sufficient to cause morbidity. 16 were assigned a threshold clinical score and were euthanized. 4 died without achieving a threshold clinical score. These 20 animals are classified as category E animal use.

Study #11

1 Marmoset

This purpose of this study is to develop a safe and effective combination vaccine to

The animals in this study were monitored at least twice each day. Out of 24 marmosets used for this study, 22 were still alive at the end of the reporting year. One animal (31191) died due to a clinical event unrelated to the protocol. One animal (30462) developed clinical signs of morbidity after developing a hematoma and died prior to euthanasia. This animal is classified as category E animal use.

Study #12

2 Cynomolgus Macaques

Animals were inoculated with an infectious agent after treatment with vaccine or control therapy.

Clinical signs must be observed

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 12 cynomolgus macaques used for this study, 10 survived to the end of the study without developing any signs of infection sufficient to cause morbidity. 1 was assigned a threshold clinical score and was euthanized. 1 died without achieving a threshold clinical score. These 2 animals are classified as category E animal use.

Study #13

7 Guinea Pigs

Animals were inoculated with an infectious agent after treatment with vaccine or control therapy.

Clinical signs must be observed

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 26 guinea pigs used for this study, 19 survived to the end of the study without developing any signs of infection sufficient to cause morbidity. 6 were assigned a threshold clinical score and were euthanized. 1 died without achieving a threshold clinical score. These 7 animals are classified as category E animal use.

Study #14

10 Cynomolgus Macaques

Animals were inoculated with an infectious agent after treatment with vaccine or control therapy.

Clinical signs must be observed

The animals in this study were monitored at least twice each day and scored for clinical signs of developing morbidity. Animals that receive a threshold score level are euthanized. Out of 102 cynomolgus macaques used for this study, 8 were assigned a threshold clinical score and were euthanized. Two died without achieving clinical threshold scores. These 10 animals are classified as category E animal use.

“Column E” Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A *Column E explanation must be written so as to be understood by lay persons as well as scientists.*

1. Registration Number: 74-R-0012

2. Number of animals used in this study: 31

3. Species (common name) of animals used in the study: Pigs

4. What is the purpose of this study?

Effect of Sepsis on Protein Metabolism. The primary significance of this project is the development of a new approach to nutritional support in sepsis that will promote and preserve muscle mass and have no adverse physiological effects.

5. Describe what pain and/or distress occurred; and explain the procedure producing pain and/or distress:

Surgery: implantation of multiple catheters and stoma: (under general anesthesia)

Post-surgery recovery: (pain relief is given for 4 days)

Sepsis is induced by IV infusion of *Pseudomonas aeruginosa* 10-14 days after surgery.

During induction of sepsis (1st 6 hrs), pigs will develop a fever and may show clinical signs (chills, malaise, lethargic)

Sepsis recovery begins after 6 hours by giving antibiotics and pain relief to mimic the human clinical condition.

6. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results: *(For Federally mandated testing, see Item 6 below)*

This sepsis/recovery model needs to be clinically relevant in order to translate the metabolic changes that we are studying to human situations. In most human clinical sepsis situations, treatment (including pain relief) is started after 6 hours of the start of the septic condition (when typical symptoms are diagnosed). Therefore, we do not give pain relief in the first 6 hours of the sepsis.

7. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

N/A

The University of Texas at Austin
Registration Number: 74-R-0029/1453
Annual Report of Research Facility: Fiscal Year 2013
Explanation for USDA Classification E

The IACUC has approved one protocol that exposes animals to potentially painful stimuli without the use of analgesics, under carefully controlled conditions. Grasshopper mice are predatory species that routinely feed on scorpions. There is some evidence that they are resistant to scorpion toxins, but this resistance has not been measured or studied at the molecular level. The purpose of this study is to determine if grasshopper mice have evolved resistance to the pain-inducing proteins in bark scorpion venom and whether the mechanism of resistance involves structurally modified ion channels in pain-sensing neurons. Pain-inducing toxins can only be identified by measuring the behavioral response of sensitive mammals to venom or individual toxins isolated from venom. Analgesics and tranquilizers cannot be used to alleviate the pain induced by the toxins because they would mask the behavioral response that is being measured and the investigator(s) would not be able to identify which toxins produce pain. A very small amount of diluted study material, which may cause irritation or pain (equivalent to an insect sting), is injected into a footpad, and the animal is monitored for paw licking, paw shaking, or other signs of irritation for 30-60 minutes before euthanasia. 27 animals were utilized for these studies:

Genus and Species	Common Name	Number of animals
<i>Onychomys arenicola</i>	Mearns' grasshopper mouse	27
	Total:	27

Amended 04/2013

Column E Explanation

416 1503

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 74-R-0049

2. Number 332 of animals used in this study.

3. Species (common name) GERBIL of animals used in the study.

4. Explain the procedure producing pain and/or distress.

ALL 332 GERBILS WERE INVOLVED IN EFFICACY STUDIES SCREENING POTENTIAL DRUGS FOR THE TREATMENT OF HAEMONCHUS CONTRACTUS IN SHEEP. PRIOR TO THE STUDIES NO PAIN AND/OR DISTRESS WAS EXPECTED. ALL ANIMALS WERE TREATED BY GAVAGE

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

THE FIVE GERBILS LISTED IN CATEGORY E (OUT OF 332) WERE LETHANIC AT ONE OBSERVATION PERIOD AFTER TREATMENT AND ALL 5 RECOVERED BY THE NEXT OBSERVATION POINT AND DID NOT APPEAR TO REQUIRE ADDITIONAL TREATMENT.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

OCT 24 2014

Category E Explanation

Category E includes 60 guinea pigs which were inoculated with *Corynebacterium diphtheriae* to establish an LD50 dose. *C. diphtheriae* is a bacterium which infects the throat and skin. It secretes a toxin and causes a disease called diphtheria. The toxin may cause paralysis and congestive heart failure. There are non-toxigenic strains as well, which may cause inflammation of the whole body, heart, joints or create bone infections. Once an LD50 is established, animals will be immunized to determine the efficacy of the immunization.

The guinea pig model with death as an endpoint has been used in the past to investigate the toxicity of diphtheria. Analgesics have the potential of invalidating the study results by skewing protection endpoints of the vaccine. In addition, there is a potential of a rebound effect where immunized animals may recover from clinical signs of moribundity. Animals are monitored by qualified staff on a routine basis so they can be euthanized when demonstrating clinical signs consistent with imminent death.

IACUC-APPROVED EXCEPTIONS:

1. Rabbits – 44 rabbits during this reporting period

The IACUC approved the use of a chemical grade anesthetic agent for non-survival surgery for collection of tissues (97% pure urethane) because the pharmaceutical grade is not available for sale in the USA and the agent was the only anesthetic that was appropriate for the scientific protocol.

2. Rabbits – 18 kits during this reporting period

The IACUC has approved the use of hay rather than a nest box for rabbit offspring less than one month of age. The sides of the cage and the flooring protect offspring from getting entrapped or falling through the cage sides or floor. By eliminating a hard-sided nest box, there are fewer incidents of offspring getting trapped and squeezed between the cage walls and the nest box. The hay provides a safe haven for the offspring in breeding cages of this design.

1474

Guinea pigs challenged with *Chlamydia caviae* develop an infection localized to the genital epithelium and do not experience pain or distress (as evidenced by lack of overt signs of illness) during resolution of the infection (approximately 36 days from time of challenge). This is similar to the situation in human females where approximately 80% are asymptomatic. Additionally, in the available literature, there have been no reports of Guinea pigs displaying morbidity or mortality after genital chlamydial infection. However, the genital chlamydial infection may result in upper genital tract sequelae, such as infertility.

There is a lack of evidence in the literature that animals infected with this organism experience pain and distress. Additionally, the use of pharmacological agents such as analgesics will alter the immune response and there is significant evidence in the scientific literature showing that the administration of pain medication interferes with immune functions (for example with antigen processing and presentation; the inflammatory mechanisms involved in the initiation; and cytokine differentiation and recruitment of T cells to the joints or other sites of inflammation; as has been shown for NSAID's (Refs: 1-6), morphines (opioids) (Refs: 7-8) or steroids (Refs: 9-12). Moreover, it is not predictable how specific drugs for pain control may affect the expected outcome of our studies. It is likely that pain control will alter both T cell and APC function and will jeopardize the outcome of our study.

Column E Explanation Form for Regulated Species

This form is intended as an aid to completing the Column E explanation. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 74-R-0071

2. Number of animals used under Column E conditions in this study. 129

3. Species (common name) of animals used in this study. Guinea Pig

4. Explain the procedure producing pain and/or distress, including reason(s) for species selected.

One hundred twenty-nine (129) Guinea Pigs – 10128X4503C

One hundred twenty-nine guinea pigs were used to: 1) provide biological samples from animal models of invasive pulmonary Aspergillosis (IPA) to support the development and assessment of new assays for diagnosis of IPA; 2) evaluate investigational methods of treatment for IPA; 3) refine and optimize animal models for IPA. Animals were immunosuppressed and challenged with *Aspergillus fumigatus*. During the period of infection animals were observed at least twice daily for signs of illness. Any distressed animals were euthanized. The guinea pig is an established model of IPA in our lab. The guinea pig model of IPA was used as an alternative evaluation species (vs mice) when larger quantities of tissues or sera were desired for evaluation of surrogate markers of infection or in diagnostics development or research.

5. Provide scientific justification why pain and/or distress could not be relieved.

State methods or means used to determine that pain and/or distress relief would interfere with test results.

Pain or distress relief was not provided during the course of *Aspergillus* infection due to the potential that anesthetics, analgesics or sedative drugs would alter survivability or influence tissue burden of infection. This has been determined through experience of the lab with the animal model over the course of many years. These animals were included in Category E due to the potential for developing clinical signs of pain or distress associated with systemic Aspergillosis infection.

Species (number used)	Exception to Space requirements
Sheep (156)	Sheep were maintained in metabolic stanchions for up to 48 hours prior to surgery for psychological adaption to this type of housing. The stanchions allow the sheep to stand or lie down in sternal recumbancy. The sheep were surgically instrumented with specialized equipment (chronic indwelling vascular catchers, ect.). These sheep are provided a high level of intensive care and monitoring. They were monitored 24 hours a day by research staff during the work week and observed minimally 2 times daily on weekends and holidays. In addition, they were observed daily, seven days a week, by Animal Resources Center (ARC) veterinary and or husbandry staff.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 74-R-0075
2. Number of Animals Used in this Study: 45
3. Species (common name) of Animals Used in this Study: Syrian Golden Hamsters _____
4. Explain the procedure producing pain and/or distress.

This protocol is designed to evaluate the effectiveness of new antibiotic molecules for the treatment of *Clostridium difficile* infections (CDI, toxic megacolon). The primary basis for determining an effective compound is that it will lengthen the survival time of hamsters when compared to the control group (described below).

Control Animal Group: In these experiments, the Control group is defined as subjects receiving the infectious dose of *C. difficile* and is not given the test drugs or analgesics. The control group is critical to the interpretation of the test data i.e. the statistical evaluation of the test data relies solely on what happens in the control group. To ensure the validity of the data, both the test groups and control groups are treated in exactly the same manner, except for the use of antibiotic test drug in the test group. Therefore, since analgesics are not given to the test group, analgesics are also not given to the control group; this ensures that both the test group and control group are evaluated under the same conditions with the only variable being the test antibiotic used in test group. Because of this approach in standardizing the control group to the test group, (1) we do not include control group animals each time samples are tested, but only when parameters change (2) the overall numbers of animals in the control group is drastically reduced.

Procedures Producing Pain: In this model, pain results from the establishment of a gastrointestinal infection in the hamster, following administering an infectious dose to the animal. Other procedures involving handling are routine, such as administration of subcutaneous dose of antibiotic to commence the infection or administering bacteria or drug via oral gavage.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.

Administration of analgesics may alter the course of infection leading to an increase in survival of hamsters in the control group, or conversely cause a decrease in survival; which would severely affect the statistical interpretation of test results, since the quality of control group data is critical to evaluating the results of the test group as mentioned above (1-5). The effect of analgesics may occur through a

potential delay of gastric clearance, which could retain and increase the levels of toxin load in gut, thereby increasing disease severity and likely a faster time to death (6-10). According to White et al. (6) pain management is challenging in patients with toxic megacolon because non-steroidal anti-inflammatory drugs may exacerbate bleeding; further, opioids may also adversely affect bowel peristalsis causing an increased risk of colonic perforation. Therefore, the use of analgesics to relieve pain may adversely affect these experiments. Although, we have not found there to be use of analgesics in the hamster model of CDI, from the literature (Jan 11th 2012; Ref. 1-5 as examples), the main reasons for not using analgesics in our experiments are described above. Should we use analgesics in the control group, it would also be scientifically required that they also be used in the test group to mitigate differences between the two groups. However, since different drug compounds are evaluated in our study, there is the potential for analgesics to affect their activity or pharmacokinetic (PK) properties, which affects the outcome of the experiment and generate false data. Further, the use of analgesics would place a greater demand, that the control group must be run each time new antibiotic molecules are tested so as to encompass possible PK disruptions, which is unlike our current practice stated above i.e. our approach above reduces numbers, whilst the inclusion of analgesics may increase the number requirement over time.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 74-R-0075
2. Number of Animals Used in this Study: _____ 48 _____
3. Species (common name) of Animals Used in this Study: Syrian Golden Hamsters _____
4. Explain the procedure producing pain and/or distress.

The protocol is designed to evaluate the effects of mutations in key enzymes in *Clostridium difficile* on how this organism causes disease i.e. its pathogenesis in causing diarrhea. The primary basis for determining that the mutation affects the pathogenesis of the bacterium is as follows: Animals infected with a mutant that is less pathogenic will survive for a significantly longer period than animals infected with the wild type (un-mutated virulent bacterium).

Control and Test Animal Groups: In these experiments, the groups received either mutant bacteria or wild-type bacteria (control group). After infecting the hamsters with either test or control bacteria the survival of the hamster is measured over a period of days. To ensure the validity of the data, both the test groups and control groups are treated in exactly the same manner and the results analyzed for statistical difference. Analgesics are not given to either group as this may alter the course of infection and yield false results. Since this is a short term project, we do not anticipate having to repeat experiments with the control group, which ensures that the overall number of animals used are lowered. Secondly, we only put into animals unique mutants and ensure we do not reproduce data for the same mutation. Only when parameters change would we do further tests on either group.

Procedures Producing Pain: In this model, pain results from the establishment of a gastrointestinal infection in the hamster, following administering an infectious dose to the animal. Other procedures involving handling are routine, such as administration of subcutaneous dose of antibiotic to commence the infection or administering bacteria or drug via oral gavage.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.

Administration of analgesics may alter the course of infection leading to an increase in survival of hamsters in the control group, or conversely cause a decrease in survival; which would severely affect the statistical interpretation of test results, since the quality of control group data is critical to evaluating the results of the test group as mentioned above (1-5). The effect of analgesics may

Column E Explanation

occur through a potential delay of gastric clearance, which could retain and increase the levels of toxin load in gut, thereby increasing disease severity and likely a faster time to death (6-10). According to White et al. (6) pain management is challenging in patients with toxic megacolon because non-steroidal anti-inflammatory drugs may exacerbate bleeding; further, opioids may also adversely affect bowel peristalsis causing an increased risk of colonic perforation. Therefore, the use of analgesics to relieve pain may adversely affect these experiments. Although, we have not found there to be use of analgesics in the hamster model of CDI, from the literature (11/17/2013; Ref. 1-5 as examples), the main reasons for not using analgesics in our experiments are described above. The effect of analgesics on the microbiology or pathogenesis of *C. difficile* is largely unknown and the potential for obtaining false data due to analgesics is unknown. Further, the use of analgesics would place a greater demand for increasing animal numbers, which is counter to our goal of keeping animal numbers low.

2012/13-14-A06 "Ileal cannulation of hamsters for antimicrobial efficacy testing"58 used**Justification for Category E**

To minimize the pain that animals can experience due to surgery, animals will be given a preemptive dose of buprenorphine (0.02 mg/kg, s.c.) or meloxicam (2 mg/kg, s.c.), followed by post-surgical doses of buprenorphine (0.02 mg/kg, s.c.) or meloxicam (2 mg/kg, s.c.). Additional pain medication will be given as needed (q12 hours) to relieve any discomfort an animal may be experiencing due to surgery. The prophylactic and/or immediate post-surgical dose of antibiotics will be withheld from all study animals. Normally antibiotics would be given with abdominal surgery. However, the use of an antibiotic at this point in the model would disrupt the normal flora (bacteria) in the intestinal tract and generate a condition that would compromise the disease phase of this model and subsequent evaluation of test compounds. Therefore it is imperative that the use of surgery-associated antibiotics be withheld. Animals will be monitored for pain and distress due to surgery every 6 hours within 24 hours of the procedure and every 12 to 18 hours after the initial 24 hours. Negative effects from surgery can be presented as lethargy, swollen abdomen, hypothermia, and decreased food consumption. If an animal experiences severe distress/pain due to surgery, and additional pain medicine has not helped, then that animal will be euthanized by carbon dioxide asphyxiation and cervical dislocation. All monitoring times will be recorded and a copy will be submitted to DLAM at the end of the study.

After animals have fully recovered from surgery (7 days), they will be orally infected with Clostridium difficile. After being infected, an animal may experience pain or distress as a result of infection and/or antimicrobial treatment. Most of the antimicrobial compounds being tested are new investigational compounds and possible drug interactions have not been fully determined. If another drug is used to relieve pain and/or distress, this may interfere with the possible therapeutic effects a novel antibiotic may have in this model. For example, buprenorphine (analgesic) is metabolized by the cytochrome 450-3A4 (CYP450-3A4) pathway. This same metabolic pathway interacts with 3 different antibiotic classes that include macrolides (clarithromycin), rifamycins (rifampin), and fluoroquinolones (ciprofloxacin). Interactions of these drugs in this pathway have been shown to alter the pharmacokinetics of each drug, which can directly impact their efficacy within the host (animal or human). Additionally, several nonsteroidal anti-inflammatory drugs (NSAIDS) are metabolized by the cytochrome 450-2C9 (CYP450-2C9) pathway, which also metabolically interacts with the antibiotics metronidazole and rifampin. As is the case with buprenorphine, the interaction of NSAIDS and antibiotics in the CYP450-2C9 pathway can impact the efficacy of each drug by altering their metabolism and pharmacokinetics in the host. Given these facts about documented drug interactions within critical metabolic pathways (Burton ME and Granowitz EV, et al.), and how these interactions can interfere with drug efficacy in the host, it is imperative that non-study associated drugs that are used to relieve pain and/or distress not be dosed in this animal model after the animal is infected with C. difficile so that the therapeutic efficacy of a new investigational compound can be accurately evaluated. If a new antimicrobial were efficacious in this animal model, then this would be critical to its clinical development for treating life-threatening Clostridium difficile-associated diarrhea (CDAD) in humans.

NP 6/4/2014

After infection, animals will be monitored every 6 to 8 hours, over the duration of a study (up to 24 days after infection) for signs of illness. Historically, animals often do not manifest any signs of pain or distress prior to death, and 75% of the animals in those studies have either remained healthy and normal or have been euthanized to prevent prolonged suffering. However, there are signs that indicate a severe disease state as a result of the infection that can include lethargy, acute/chronic diarrhea, reduced water and food intake, and decreased body temperature. In addition to possible effects related to the infection, antimicrobial treatment could also induce severe side effects in an animal as well. Signs of antibiotic related effects include acute paralysis, increased breathing rate, increased heart rate, and a rough coat. To prevent dose related effects, all antimicrobials tested in this model will be pre-screened for toxicity by the sponsors, and dosing levels will be based on what has been safely used for testing other antimicrobials in this model. Additionally, the 'DLAM Criteria for Removing Animals from Study' will be used as a guide for detecting a sick animal, and any animal that appears to be ill will be promptly euthanized (carbon dioxide and cervical dislocation) before they become severely moribund. A clinical observation sheet for each day of the study will be maintained that will include observations and animal disposition noted, dated (day and time) and initialed. At the end of each study, a copy of the clinical observation sheets for a study will be sent to DLAM.

2012/13-21-A06 "Experimental Clostridium difficile infection in hamsters"

374 used

Justification for Category E

Animals associated with this model may experience pain or distress as a result of infection and/or antimicrobial treatment. Historically, animals often do not manifest any signs of pain or distress prior to death, and 75% of the animals in those studies have either remained healthy and normal or have been euthanized to prevent prolonged suffering. Signs that indicated a severe disease state as a result of the infection include lethargy, acute/chronic diarrhea, hypothermia, reduced water/food intake, and swollen peritoneum. In addition to the possible effects related to the infection, antimicrobial treatment could also induce severe side effects in an animal as well. Signs of antibiotic related effects include acute paralysis, increased respiratory/heart rates, and a rough coat. To prevent dose related effects, all antimicrobials tested in this model will be pre-screened for toxicity by the sponsors, and dosing levels will be based on what has been safely used for testing other antimicrobials in this model. Additionally, the 'DLAM Criteria for Removing Animals from Study' will be used as a guide for detecting a sick animal, and any animal that appears to be sick will be removed from the study and immediately euthanized (carbon dioxide and cervical dislocation).

Most of the antimicrobial compounds being tested are new investigational compounds and possible drug interactions have not been fully determined. If another drug is used to relieve pain and/or distress, this may interfere with the possible therapeutic effects a novel antibiotic may have in this model. For example, buprenorphine (analgesic) is metabolized by the cytochrome 450-3A4 (CYP450-3A4) pathway. This same metabolic pathway interacts with 3 different antibiotic classes that include macrolides (clarithromycin), rifamycins (rifampin), and fluoroquinolones (ciprofloxacin). Interactions of these drugs

NP 6/4/2014

in this pathway have been shown to alter the pharmacokinetics of each drug, which can directly impact their efficacy within the host (animal or human). Additionally, several nonsteroidal anti-inflammatory drugs (NSAIDS) are metabolized by the cytochrome 450-2C9 (CYP450-2C9) pathway, which also metabolically interacts with the antibiotics metronidazole and rifampin. As is the case with buprenorphine, the interaction of NSAIDS and antibiotics in the CYP450-2C9 pathway can impact the efficacy of each drug by altering their metabolism and pharmacokinetics in the host. Given these facts about documented drug interactions within critical metabolic pathways (Burton ME and Granowitz EV, et al.), and how these interactions can interfere with drug efficacy in the host, it is imperative that non-study associated drugs that are used to relieve pain and/or distress not be dosed in this animal model after the animal is infected with *C. difficile* so that the therapeutic efficacy of a new investigational compound can be accurately evaluated. If a new antimicrobial were efficacious in this animal model, then this would be critical to its clinical development for treating life-threatening *Clostridium difficile*-associated diarrhea (CDAD) in humans.

After infection, animals will be monitored every 6 to 8 hours, over the duration of a study (up to 25 days after infection) for signs of illness. An clinical observation sheet for each day of a study will be maintained that will include observations and animal disposition noted, dated (day and time) and initialed. At the end of each study, a copy of the clinical observation sheets for a study will be sent to DLAM for their records.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 74-R-0106

2. Number 25 of animals used in this study.

3. Species (common name) Bovine of animals used in the study.

4. Explain the procedure producing pain and/or distress.

The animals were used in the challenge protection test to demonstrate non-interference of host animal immunogenicity for Feskevold Mulleder-Mannheim Haemolytic Boden-Toxoid Code 6935.01 with or without Titamer S virus protect. All 25 animals were challenged including 5 placebo and vaccinated with 6935.01 alone and 20 vaccinated with 6935.01 plus Titamer S post-vaccination. Since the USDA requires observation for clinical signs post-challenge, we know that this experiment would produce some degree of pain and distress for the placebo and vaccinees depending on the degree of protection conferred by the vaccination.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Same animal as 4.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency USDA CFR Vet. Services Memo. #800.301

Explanation of Subjects Reported in Column E (APHIS Form 7023)

Fiscal Year 2013

Texas Parks and Wildlife Department

2625 FM 1340

Hunt, TX 78024

Sixty four feral pigs were subjects in experiments investigating the effects of a candidate active ingredient for feral pig control. No anesthesia was administered to subjects because doing so would alter the normal feeding behavior of feral pigs. A focus of the investigation was to determine whether the candidate active ingredient could be readily delivered to feral pigs in a candidate bait matrix (i.e. no taste aversion detected). Administration of anesthesia would compromise the integrity of the investigation.

Date: December 16, 2013

Institution: University of Houston (Registrant 74-R-0020)

CORRECTION/ADDENDUM TO 2013 ANNUAL REPORT

Additional exception not previously reported:

The Institutional Animal Care and Use Committee of the University of Houston granted an exception to the water requirement for nonhuman primates (watering less than twice a day for one hour each time).

After careful review of the scientific justification, two investigators were granted IACUC approval to utilize carefully monitored water control as a motivational tool for cognitive testing in rhesus macaques. At intervals of no more than once per week, animals are provided a full ration of water for 2-3 hours in the morning on the day prior to a scheduled testing session, at which time the water is removed. Depending on the testing schedule, some of these animals have the potential to go without water for 24 hours. Not all subjects are tested each week.

On other days, animals are provided water during and after their cognitive training session for at least 2 hours per day. The water restriction does not exceed 24 hours, therefore meeting AWA standards and regulations. There are additional periods during the week during which animals are provided full access to water.

Per the IACUC-approved protocol, these animals are assessed daily by the investigative and veterinary staff. The animals are routinely weighed; the weights are provided to the full IACUC to review on a monthly basis. There have been no clinical problems noted in these animals.

During fiscal year 2013, 12 rhesus macaques were used under this exception.

DEC 17

Texas Heart Institute, Registration no. 74-R-0037 / 1478
Attachment to 2012 Annual Report to USDA

A total of 12 calves and 7 sheep on 5 separate IACUC-approved protocols were confined to a stanchion for the minimum period of time necessary to accomplish the objectives of the approved research protocols, sometimes exceeding 24 hours, in order to provide proper care during the post-operative period, and to prevent harm to the animal during this period. The IACUC reviewed and approved the explanation and justification for "extended restraint" in each of these protocols.

Category E Explanation

Category E includes 60 guinea pigs which were inoculated with *Corynebacterium diphtheriae* to establish an LD50 dose. *C. diphtheriae* is a bacterium which infects the throat and skin. It secretes a toxin and causes a disease called diphtheria. The toxin may cause paralysis and congestive heart failure. There are non-toxigenic strains as well, which may cause inflammation of the whole body, heart, joints or create bone infections. Once an LD50 is established, animals will be immunized to determine the efficacy of the immunization.

The guinea pig model with death as an endpoint has been used in the past to investigate the toxicity of diphtheria. Analgesics have the potential of invalidating the study results by skewing protection endpoints of the vaccine. In addition, there is a potential of a rebound effect where immunized animals may recover from clinical signs of moribundity. Animals are monitored by qualified staff on a routine basis so they can be euthanized when demonstrating clinical signs consistent with imminent death.

IACUC-APPROVED EXCEPTIONS:

1. Rabbits – 44 rabbits during this reporting period

The IACUC approved the use of a chemical grade anesthetic agent for non-survival surgery for collection of tissues (97% pure urethane) because the pharmaceutical grade is not available for sale in the USA and the agent was the only anesthetic that was appropriate for the scientific protocol.

2. Rabbits – 18 kits during this reporting period

The IACUC has approved the use of hay rather than a nest box for rabbit offspring less than one month of age. The sides of the cage and the flooring protect offspring from getting entrapped or falling through the cage sides or floor. By eliminating a hard-sided nest box, there are fewer incidents of offspring getting trapped and squeezed between the cage walls and the nest box. The hay provides a safe haven for the offspring in breeding cages of this design.
